### ASEANPLAS 2008 under the theme “High-efficiency, Economic, Eco-friendly Injection molding machines,”

**NISSEI** will exhibit the second-generation hybrid type injection molding machines equipped with the X-pump, which have combined merits of the electric and hydraulic machines.

New materials “**VOLTIGA**” for evolving product making in future will be used at the hall to demonstrate the capability of the hybrid machines with the injection pressure and injection velocity feedback control function, which inherit such characteristics of the conventional machines as the low running cost, high durability, and high-output linear injection.  
Our Booth at 3F01

**“The Agency for Natural Resources and Energy” Director-General’s Award**
