**Progressive Components Introduces New Roller Pullers™  
for Parting Line Sequencing**

February 7, 2007 – Progressive Components, a leading supplier of components for the injection mould, blow mould and die cast tooling industries worldwide, announces the addition of its new Roller Pullers™, advancing the standards over other devices for controlling the sequence of openings for parting lines within a mould.

Progressive's new Roller Pullers feature these advantages:

- Smooth, Friction Free action ideal for clean room operations
- No grease required on external components
- Spring 'sight window' for adjusting pull force
- Mounting pattern compatible with industry standards
- Competitively priced

"There are many ways to hold a plate when controlling parting line sequences," explains Glenn Starkey, President of Progressive Components. "Roller Pullers are simple and effective approach, engineered especially for mid-volume production runs targeted to perform beyond a million cycles."

In 3-plate moulds, use the Roller Pullers to draw the "Cavity plate" away from the "Third plate", exposing the runner. For stripper plate moulds, Roller Pullers are a means to retain a moving plate or hold the fixed side plate while side actions are being pulled. In addition to parting line sequence control, Roller Pullers can be used to pull or retain double ejector plates, or to retain any other floating mould plate.

Should "real world" conditions require additional pull force, tool room personnel are able to adjust pulling force up to 2-1/2 times the original setting using the spring sight window.

Roller Pullers fit within Progressive's Friction Free™ engineering standards with no lubrication required for the product to function long-term, making it a unique choice for medical moulds or tools with downstream paint operations where part contamination is a concern.

Progressive Components offers worldwide distribution.

For more information or to purchase Roller Pullers, call Progressive Components Asia, Ms. Jane Lai, at +65 6753 3212 or email [sales.asia@procomps.com](mailto:sales.asia@procomps.com)
