Progressive Components Adds New Range Of Metric Top Locks

Wauconda, IL, USA – Progressive Components has expanded its already extensive line of globally available mould alignment products by adding a new range of Metric Top Locks.

Like the popular and widely used metric Side and Guide Locks that Progressive offers, the new metric Top Locks provide positive guidance between the cavities and cores. In addition, unequal thermal expansion of the mould halves will not cause these locks to bind up.

Five new sizes range between 26mm x 35mm and 45mm x 100mm.

“As tooling programs become more and more global, Progressive has stepped up its efforts to offer the most extensive line of global standards, now including this new range of Metric Top Locks, to accommodate our customers” comments John Wakefield, Managing Director of Progressive Components Europe. “These standards continually raise the bar on components that truly deliver faster mould manufacture for less cost and quality performance that prevents mould downtime”.

With worldwide distribution from three continents, these products are available to mould builders and moulders throughout the industry.

For more information or to order these and other products, contact Progressive Components Asia, Jane Lai at [65] 6753 3212, or visit www.procomps.com.
